

Presentations available without speaker:

A number of presentations given by u3a members and outside speakers are available on the u3a Climate Change Network website, at: [u3a: Climate Change & the Environment: Recordings and slides from presentations \(u3asites.org.uk\)](https://u3a.org.uk/ClimateChange/Recordingsandslidesfrompresentations) U3a groups can make use of these presentations but should note that they will become dated unless the authors update them, which we cannot guarantee will happen.

Included in this list is an excellent presentation by the renowned author Mike Berners-Lee delivered to the Countdown to COP on-line u3a group (and made available to the wider u3a community) in June 2022:

The main themes of Mike Berners-Lee's talk draw together issues around climate breakdown, global energy use, biodiversity loss, food security, ruined soils, disease threats, environmental pollution and carbon storage. He sees the 2020s as the "make or break years" when humanity must urgently tackle all these challenges together and wake up to the need for "global systemic change."
