

## **Participants Wanted for Research on Mobile Gaming**

My name is Tianyu Guo. I am a master student studying Human-Computer Interaction at University College London. As part of my Master's degree project, I am conducting a study with people aged 55+. I am particularly interested in finding out how to make an app more attractive for them through proper design, so I would like to invite some participants to join me in a group discussion.

*Research Summary –*

### **Participants Wanted for Research on Mobile Gaming**

Are you aged 55+ and interested in sharing your opinions and experience of playing games on mobile devices (phones/tablets)? Then, please join us!

We are a group of researchers at University College London and we are looking for individuals aged 55+ to participate in a small group discussion about:

- Your experiences with mobile games
- What motivates you to play games
- Your likes and dislikes

Your insights will really help us learn more about how you view gaming, which we hope will allow us to develop more engaging therapies for stroke and dementia in the future!

Focus groups will be held between 25th - 28th June at University College London - let us know which dates work best for you.

The group discussion will last between 60-90 minutes, and consist of an easy-going conversation in a group of 5-6. Refreshments will also be served.

If you would like to participate in our focus group or would like more information, please contact me via the email below:
