

We need people who wear hearing aids to trial our new spatial speech test.

Often hearing aid users report difficulty hearing speech in noisy environments as well as identifying where the speech is coming from. **We have developed a new way of testing this to work towards improving the performance of hearing aids in these situations.**

Our new test takes place at the **UCL Ear Institute in Kings Cross, London**, and involves identifying words in background noise as well as their location, while you wear your hearing aids. The session lasts around **1 -2 hours** and your travel expenses will be reimbursed and you will be given **£10 per hour as a token of our gratitude.**

**We are following for two groups of participants for take part in this study:**

- 1) People who wear a hearing aid in both ears
- 2) People with typically normal hearing in both ears

If you would like more information, have any questions or would like to sign up to the study then please contact me at [Bhavisha.parmar@ucl.ac.uk](mailto:Bhavisha.parmar@ucl.ac.uk) or call 07973366725.

Many thanks!
