

EAST GRINSTEAD u3a POLICY ON ENVIRONMENTAL ISSUES

Aims

- To support the committee to put processes and policies in place to ensure that East Grinstead u3a is run in a way that actively aims to limit its impact on the environment.
- For members to take opportunities to inform themselves about environmental issues and the ways in which human activities contribute to waste, pollution, and global warming.
- For members to consider ways in which they can minimise their own adverse impact on the environment.

Rationale

This policy has been drawn up to provide suggestions on how East Grinstead u3a might introduce environmental guidelines within our activities in order to make a positive contribution to sustainability and the environment, and also to help mitigate climate change. More specifically, the measures listed below can help East Grinstead u3a to:

- address the concerns of members and wider society with regard to environmental issues.
- encourage communication and dialogue on environmental issues within our u3a.
- encourage a culture of awareness and a sense of responsibility within the membership with respect to sustainability and environmental issues.
- provide information to members on how they might reduce their adverse impact on the environment.
- minimise the environmental impact of organised u3a activities.

Practical Measures

The following are suggestions to raise awareness and to minimise environmental impact. Please note that committee members and group leaders have an important part to play in supporting these measures during the activities of East Grinstead u3a.

- Arrange speakers on environmental topics for some monthly hub meetings.
- Wherever possible incorporate environmental concerns into planning and decision making.
- Consider the impact of activities which take place outside, in natural ecosystems eg walking and nature groups and how trips and holidays could be made more sustainable.
- Encourage the formation of climate and environmental groups.
- Check whether venues operate environmentally responsible policies such as using local suppliers.
- Ensure, as far as possible, that refreshments are served in an environmentally friendly manner eg using crockery rather than disposable cups and plates.
- Minimise waste and encourage reuse and recycling.

- Encourage travel to meetings and events by walking, car sharing and public transport where available.
- Ensure this policy is available on the website and draw members' attention to it.

Definitions

Environmental issues: These are the often negative effects of human activity on the natural world, including climate change, pollution, drought and biodiversity loss.

Environmental protection: the practice of working to slow, halt or reverse this.

Climate Change: The UN defines climate change as referring to long-term shifts in temperatures and weather patterns. These shifts may be natural, but since the 1800s, this is primarily due humans burning fossil fuels.

A **Climate Emergency declaration:** (or declaring a climate emergency) is an action taken by governments and scientists to acknowledge humanity is in a climate emergency.
