## Future Talks

Meetings are held in Hillingdon Baptist Church on the 1st and 3rd Wednesday of the month at 10:00. The link for hybrid meetings will be sent out to everybody before the meeting.

| Date | Title | Speaker |
| :--- | :--- | :--- |
| $7 / 6 / 2023$ | Artificial Intelligence - with <br> questions and answers | Carol Mitchell |
| $21 / 6 / 2023$ | Particle Physics | Judith Sinclair |
| $5 / 7 / 2023$ | The James Webb Telescope | Carol Mitchell |

If anybody wants to join the Geology meetings they are on the 4th Tuesday of the month at 10:00. If you are not on the mailing list let Judy Peddie know so that she can send a link
Next one is on Tuesday $27^{\text {th }}$ June

The Suez Canal is a 193 km long sea level navigation running between Port Said (Būr Sa'īd) on the Mediterranean Sea and Suez port (al Suways) on the Red Sea. It is man-made canals (as the image of Port Suez looking North shows) and a natural 'Bitter' lake. It is 200 m wide at its narrowest point shown. A feature that has caused problems for Container-ships of the now 'Panamax' size (up to 110 feet wide and 40 feet
draught, being the lock chamber size of the Panama Canal).
In 2021 the 'MV Ever Given' became stuck for six days when it was blown sideways about 3.7 miles north of the Suez entrance.
The vital statistics of the MV Ever Given are difficult to image, 400 m -long ( $1,312 \mathrm{ft}$ ) with a displacement of 200,000 tonnes and maximum capacity of 20,000 'standard 20 foot' containers. It was carrying 18,300 containers. The ship is operated by Taiwanese transport company Evergreen Marine, on its way to the Dutch port of Rotterdam and its grounding caused chaos for the shipping industry; which was already under pressure from COVID-19 supply chain problems.
It was estimated by Lloyd's List that the stranded vessel was holding up $\$ 400 \mathrm{~m}$ an hour in trade.
The shipping data and news companies value the canal's westbound traffic at roughly $\$ 5.1$ bn a day and eastbound traffic at around $\$ 4.5 \mathrm{bn}$ a day at the yearly rate.
Roughly $30 \%$ of the world's shipping container volume passes through the canal, and about $12 \%$ of total global trade presently.
The reason the canal is such a popular route is that it saves a ship from travelling around the southern tip of Africa which would add 3,315 nautical miles to a journey between Tokyo / Shanghai to Rotterdam.
In January 2023 a container ship loaded with more than 65,000 tonnes of corn from Ukraine bound for East Africa was re-floated by the permanent fleet of super tugs after grounding for a day; these are now frequent incidents due to the ever increasing size of shipping for ever improving economy.

Abstract from Reuters Report by Jhoward (just because this is technology at an awesome scale!)

## Lectures

## Harrow and Hillingdon Geological Society

Meetings are currently on Zoom. If you would like to join, and are not an HHGS member, please let Hilary Place know so that you can be sent the link. Non members can have three free meetings. After that we would want you to become a member.
Second Wednesday of the month. Login at 19:45

## Harrow and Hillingdon Geological Society cont.

On their recent trip to the Suffolk coast they found that the Red Crag that they were trying to visit was being guarded by a rather scary Satyr.
