

There Are 8 (9) Planets

SOLAR SYSTEM

SUN

EARTH

VENUS

MERCURY

MOON

MARS

JUPITER

SATURN

URANUS

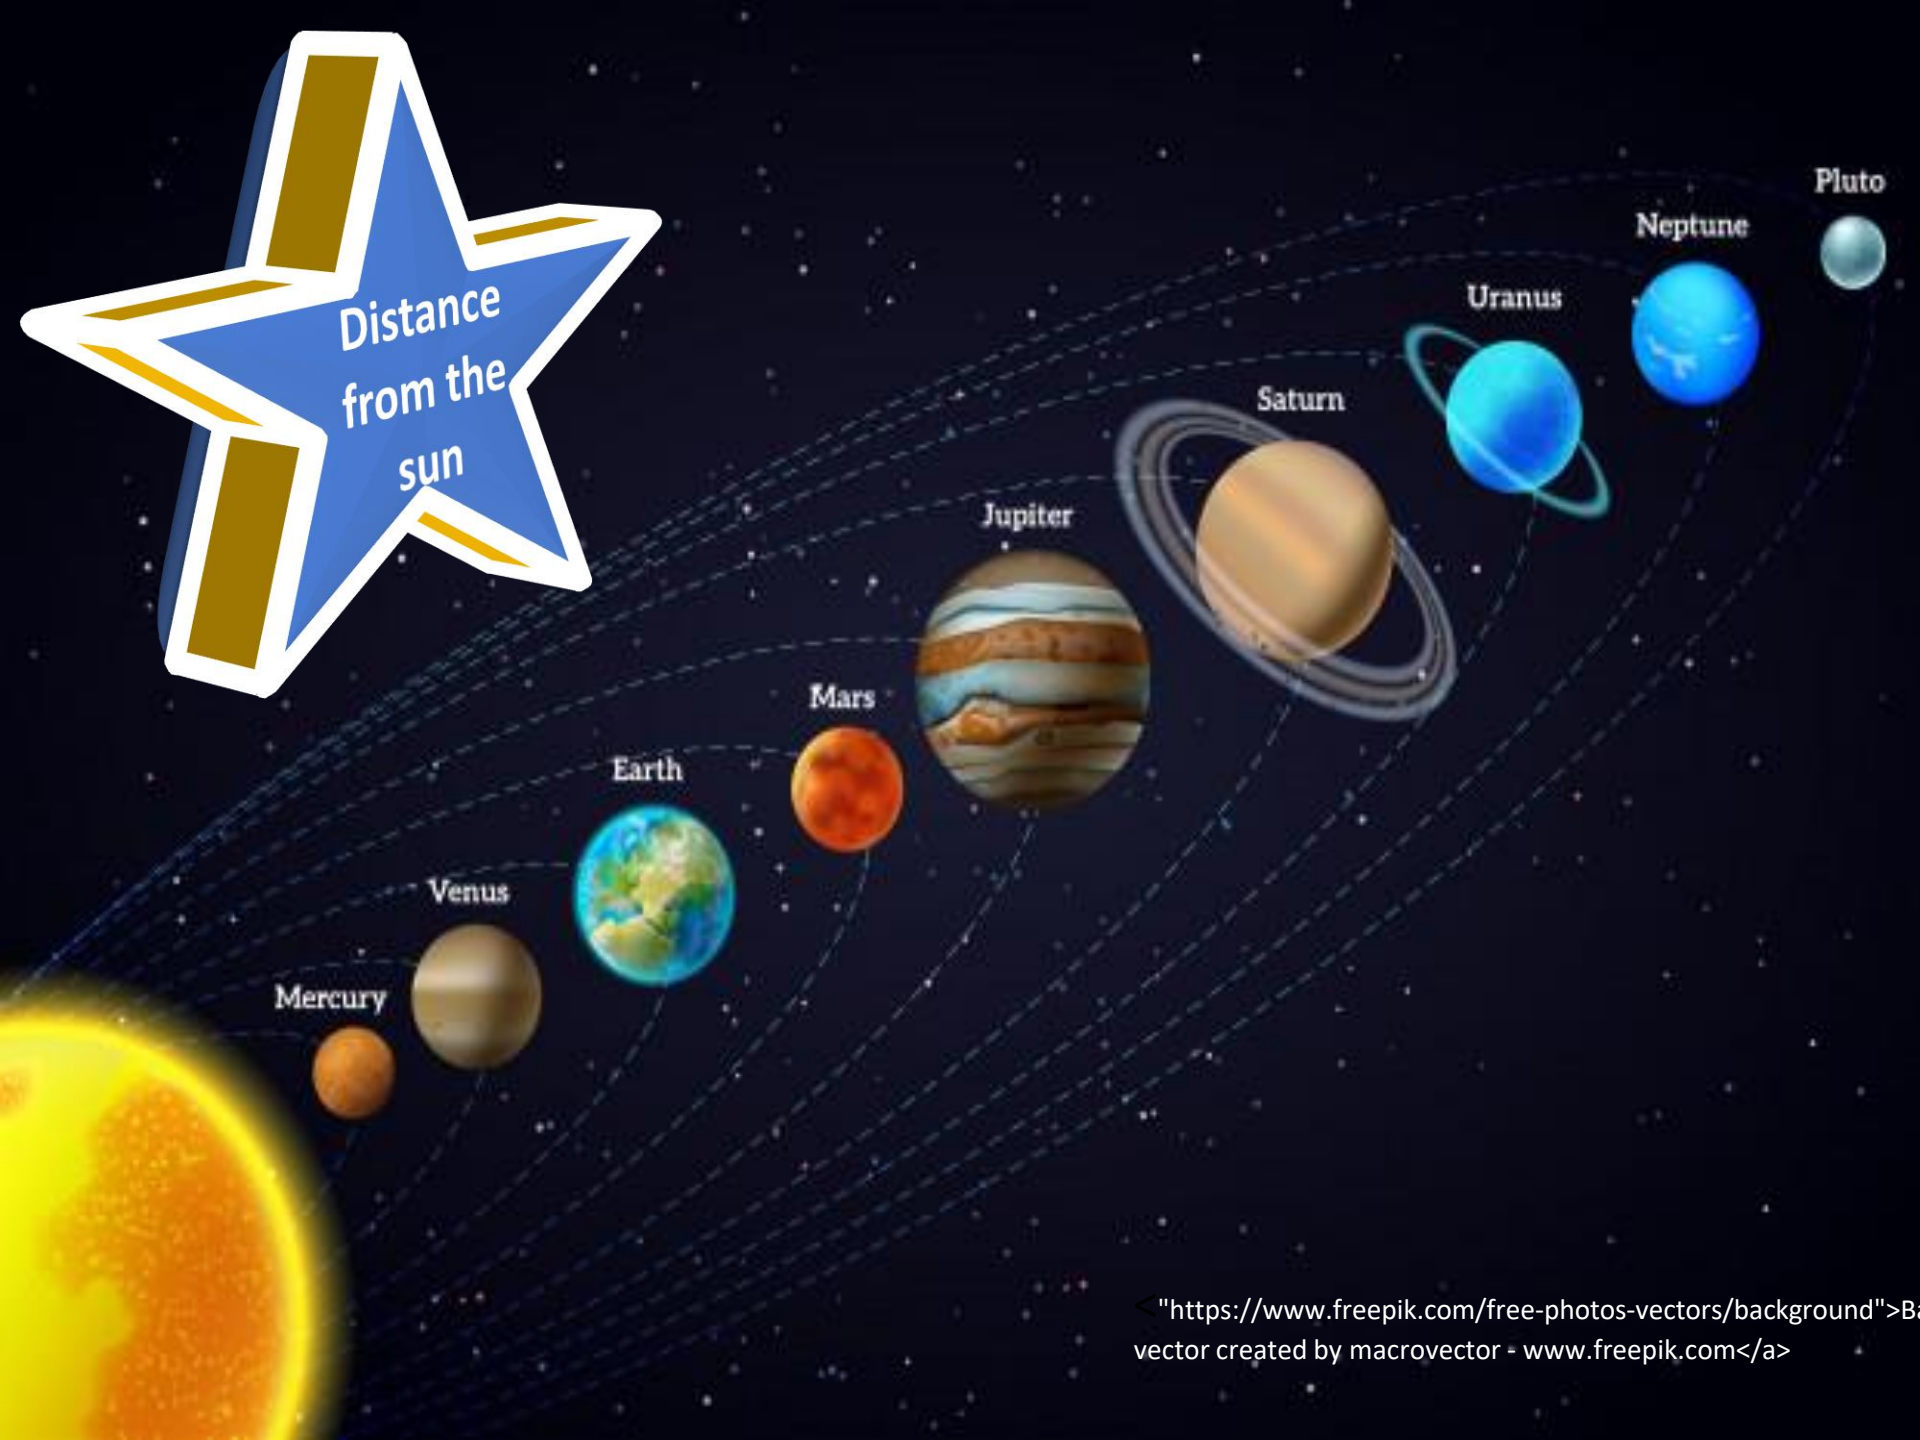

NEPTUNE

PLUTO

← A dwarf planet

Distance
from the
sun

Earth

A terrestrial planet

What do we know about it?

May be the only planet supporting life

Third planet from the sun

What is its orbit time?
365.256 solar days

Gravity?
1(x Earth's)

When formed?
4.54 billion
years
ago(approx.)

How many moons does
it have?
1

Distance from
sun?
149,600,000 km

Earth

A terrestrial planet

What do we know about it?

Shape? Spherical

Origin of the name EARTH?

Ole English word *ertha*

Anglo Saxon word *erda*

Earth is the only planet not named after a mythical god

Meaning ground or soil

Earth is both ordinary and unique in the SOLAR SYSTEM
