

Weather and Climate Group (Len Wood)

There are great expectations of warm weather when it comes to June and July and we are into summer. The graph shows a warming trend for June since 1986 and a record warm June this year, easily beating the previous record in 2018.

June 2023 was also a dry month but on a few occasions there were hefty showers over Dartmoor as shown by this photo taken looking north from Wembury on 20th June.
